

# MolecuLightDX Seamlessly Integrates with Intellicure

## What is the MolecuLightDX?

- Fluorescence imaging device for wound care that instantly detects and locates harmful bacteria linked to poor healing and infections
- Only FDA cleared class II medical device validated for non-contact, real-time fluorescence wound imaging to identify bacterial presence, location, and load
- Only fluorescence wound imaging device with broad Medicare reimbursement
- Industry-leading validated and accurate digital wound measurement solution requiring no stickers or patient contact

## What is IntellicureEHR?

- The transformative wound care documentation SMART app for your hospital's EHR, used by America's leading outpatient wound centers
- A complete EHR solution offering a clean clinical workflow, proven regulatory compliance and unparalleled reimbursement rates

## Benefits of the MolecuLight-Intellicure Integration

- Direct download of patient data from Intellicure over Wi-Fi to eliminate data entry on the MolecuLightDX and avoid double documentation
- Improved clinical workflow to obtain fluorescence images to detect and locate harmful wound bacteria in real-time and accurately measure wounds
- Automatic upload of images from the MolecuLightDX into Intellicure
  - o Digital wound measurement and standard wound images
  - o Fluorescence images denoting the presence and location of harmful bacteria in and around wounds
